Design and Technology.

The study of designing and producing.

About the Course

Explore Design and Technology through areas such as design theory and practice, design processes, environmental and social issues, communication, research, technologies, and the manipulation of materials, tools, and techniques. The course involves hands-on practical activities which develop knowledge and skills in designing and producing. <u>Find out more here</u>.

What You Will Do

This course involves both practical and theory elements. You will complete at least two design projects. These projects involve the design, production, and evaluation of a product, system, or environment and include evidence of the design process recorded in a design folio. The design folio can take a variety of different forms.

Future Opportunities

Studying Design and Technology will help with further education in design. Job opportunities in this field include product designer, civil engineer, fashion designer, architect, etc.
