

# Textile and Design.

*The study of design, manufacturing methods, fibers, yarns, fabrics, and the Australian Textile, Clothing, Footwear, and Allied Industries.*

**ATAR - BOARD DEVELOPED - CATEGORY A**

## About the Course

This course involves the study of design, communication techniques, manufacturing methods, fibres, yarns, fabrics, and the Australian Textile, Clothing, Footwear, and Allied Industries. Practical experiences, experimenting and product manufacturing is integrated throughout the content areas and includes the completion of two preliminary textile projects. [Find out more here.](#)

## What You Will Do

You will undertake two preliminary textile projects. Project 1 focuses on the generation and communication of ideas, design modification, manipulative skills, evaluation of ideas and the project, and management of time and resources. Project 2 is focused on an analysis of fabric, yarn, and fiber properties, experimental procedures, product design, fabric choice, manipulative and management skills, communication methods, and the recording of information.

## Future Opportunities

Studying Textile and Design will help with further education in design. Job opportunities in this field include clothing/textile technologist, colour technologist, interior designer, textile designer, and fashion designer.
